Methodologies to support weak students and to encourage bright students.

a. Appointment of Class Coordinators and Mentors:

- The department appoints a class coordinator for each semester to monitor a class of students and a student counselor for every 20 students as soon as he/she enters the institution in the first semester, and a mentor for every 5 top ranking students to motivate them.
- **Student counselor** establishes a close relationship with each student, orients them about college practices, follows their progress regularly (e.g., with at least fortnightly/monthly meetings) and guides them throughout the four-year course. The mentor meets the weak students periodically to discuss about the issues during the course of their study and the issues are sensitively handled.
- **The class coordinator** takes care of whole class students related with the academic performance and coordinates teaching-learning process implementation. The performance of the students is communicated to the parents periodically through progress reports. Healthy suggestions will be given to weak students' parents so that they can support their wards in academics.
- **The mentor provides** additional guidance, motivation and support to secure university ranks, publish research papers in reputed journals and develop working models.

b. Diagnosing and Tracking Student Performance and Attendance:

The performance of students is reviewed by the course teacher during the semester. Based on the marks obtained in the assessment, the students are identified either as weak or bright students. The efforts are made to strengthen learning as required by reviewing students' attendance in connection with performance, counseling the students to attend classes regularly and giving additional help if required. 'History card' is maintained to monitor the students' performance throughout their four years of study.

c. Improving Academic Performance:

The top ten students are identified in the beginning of every semester. Special coaching and motivational lectures are arranged for them. Tutorial class is conducted weekly to solve complex problems. Three faculty members are assigned for tutorial classes to assist the students. The department has a 'Student Academic Support Program' which provides additional classes, notes and guidance. Student and faculty collaborations on Laboratory experiments, Mini projects and major projects are available to students and more focus is given to weak members of the group.

d. Enhancing Communication and Presentation Skills:

The department along with English department provides slots in English language lab, where students can listen to tapes and use workbooks to improve their English knowledge, particularly spoken English. Such students will be given special chances and opportunities. Weak Students are provided with language and soft-skill development throughout their education. This makes the weak students more interactive and oriented to confidence-building, rather than 'exam-oriented' and 'job-oriented'.

e. Peer Learning Groups:

The department follows an organized approach which involves forming a group of 10 to 12 weak students who learn together with the bright students. They can revise lessons after class or on weekends, before any assessment tests. The pairing of bright and weak students results in better academic performance.
